# T series DVR User's installation and operation Manual

# Welcome

Thank you for purchasing our DVR!

This manual is designed to be a reference tool for the installation and operation of your system. Here you can find information about this series DVR features and functions, as well as a detailed menu tree.

Before installation and operation please read the following safeguards and warnings carefully!

# **Important Safeguards and Warnings**

Do not place heavy objects on the DVR.

Do not let any solid or liquid fall into or infiltrate the DVR.

Please brush printed circuit boards, connectors, fans, machine box and so on regularly. Before the dust cleaning please switch off the power supply and unplug it.

Do not disassemble or repair the DVR by yourself. Do not replace the components by yourself.

# Environment

Please place and use the DVR between  $0^{\circ}$  and  $40^{\circ}$ . Avoid direct sunlight. Stay away from heat source.

Do not install the DVR in damp environment.

Do not use the DVR in smoky or dusty environment.

Avoid collision or strong fall.

Please insure the DVR level installation in a stable workplace.

Please install in ventilated place. Keep the vent clean.

Use within the rating input and output scope.

# **1** Production Introduction

# **1.1 Product overview**

The series DVR is designed specially for security and defence field which is an outstanding digital surveillance product. It introduces embedded LINUX operating system which is more stable. It introduces standard H.264mp video compressed format and G.711A audio compressed format which insures the high quality image, low error coding ratio and single frame playing. It introduces TCP/IP network technology which achieves the strong network communication ability and telecommunication ability.

The series DVR can be used individually or online applied as a part of a safety surveillance network. With the professional network video surveillance software it achieves the strong network communication ability and telecommunication ability.

The series DVR can be applied in the bank, telecom, electric power system, judicial system, transportation, intelligent housing, factory, storehouse, water conservancy and so on.

# **1.2 Main functions**

#### Real-time surveillance

analog interface and VGA interface (VGA interface is equipped selectively)

surveillance function through monitor or display

#### Storage

non-working hard disk dormancy processing which is convenient to radiate heat, reduce power and extend the life-span

special storage format which insures the data safety

#### Compression

real-time compression by individual hard disk which insures the audio and video signal stable synchronization

#### Backup

through SATA interface and USB interface such as USB equipment, removable hard disk and so on through net download the files in the hard disk

#### Playback

individual real-time video recording as well as searching, playback, network surveillance, recording check, downloading and so on multi-playback mode zoom at arbitrary region **Net operating** through net tele-surveillance in the real time tele-PTZ control

tele-recording check and real-time playback

# Alarm linkage

multi-route relay alarm output which is convenient for the alarm linkage and light control at the spot

protecting circuits at the alarm input and output interface which protects the main machine from damage

# Communication interface

RS485 interface which fulfills the alarm input and PTZ control

standard ethernet network interface which fulfills the telecommuting function

# Intelligent operating

mouse action function

fast copy and paste operating for the same setting

# 2 Open-package check and cable connections

# 2.1 Open-package check

When you receive the DVR, please check first .

First, please check whether there is any visible damage to the package appearance. The protective materials used for the package of the DVR can protect most accidental clashes during transportation.

Then, please open the box and get rid off the plastic protective materials. Check whether there is any visible damage to the DVR appearance.

At last, please open the machine crust and check the data wire in the front panel, power wire, the connection between the fan power and the main board.

# Front panel and rear panel

- The key function specification in the front panel and the interface specification in the real panel are in the specification.
- Please check the product type in the front panel whether is accordant with the product type you order.

The label in the real panel is very important for the after service. Please protect it carefully. When you contact us for after service, please provide the product type and serial number in the label.

# 2.2 Hard disk installation

For the first use, please install the hard disk.

① disassemble the screw

3 fix the screw of hard disk

④connect SATA power wire

 $\ensuremath{\overline{\textbf{0}}}$  cover the machine

# 2.3 Front panel

⑤connect SATA data wire

 $^{(8)}$ fix the cover

6 the right connection

(9) Installation finished

- (1) Power indication light (2) Record indication light (3) Alarm indication light (4) ESC
- (5) Menu (6) Direction and OK

# 2.4 Rear panel

# 2.5 Audio and video input and output connections

#### 2.5.1 Video input connections

The video input port is BNC connector plug. The demand of input signal is PAL/NTSC BNC( $1.0V_{P-P}$ ,75 $\Omega$ ).

The video signal must be accorded with the state standard which has the high signal to noise ratio, low aberration and low interference. The image must be clear and has natural color in the appropriate brightness.

#### Insure the vidicon signal stable and credible

The vidicon should be installed in the appropriate location where is away from backlighting and low illumination or adopts the better backlighting and low illumination compensation.

The ground and power supply of the vidicon and the DVR should be shared and stable.

#### Insure the transmission line stable and credible

The video transmission line should adopt high quality coaxial pair which is chosen by the transmission distance. If the transmission distance is too far, it should adopt shielded twisted pair, video compensation equipment and transmit by fiber to insure the signal quality.

The video signal line should be away from the electro magnetic Interference and other equipments signal lines. The high voltage current should be avoided especially.

#### Insure the connection stable and credible

The signal and shield lines should be firm and connected credible which avoid false and joint welding and oxidation.

#### 2.5.2 Video output connections and options

The video output is divided into PAL/NTSC BNC( $1.0V_{P-P}$ ,75 $\Omega$ ) and VGA output(selective configuration).

When replace the monitor by the computer display, there are some issues to notice.

- 1. Do not stay in the turn-on state for a long time.
- 2. Keep the computer display normal working by demagnetizing regularly.
- 3、Stay away from the electro magnetic Interference.

TV is not a credible replacement as a video output. It demands reducing the use time and control the

power supply and the interference introduced by the nearby equipments strictly. The creepage of low quality TV can lead to the damage of other equipments.

# 2.5.3 Audio signal input

Audio port is BNC connection.

The input impedance is high so the tone arm must be active.

The audio signal line should be firm and away from the electro magnetic Interference and connected credible which avoid false and joint welding and oxidation. The high voltage current should be avoided especially.

# 2.5.4 Audio signal output

Commonly the output parameter of DVR audio signal is greater than 200mv 1K $\Omega$ (BNC) which can connect the low impedance earphone and active sound box or other audio output equipments through power amplifier. If the sound box and the tone arm can not be isolated, howling phenomena is often existed. There are some methods to deal with the above phenomena.

- 1. Adopt better directional tone arm.
- 2. Adjust the sound box volume to be under the threshold that produces the howling phenomena.
- 3. Use fitment materials that absorb the sound to reduce reflection of the sound.
- 4. Adjust the layout of the sound box and the tone arm.

# 2.6 Speed dome connections

1. Connect the 485 lines of the speed dome with the DVR 485 interface.

- $2_{\text{s}}$  Connect the video line with the DVR video input.
- 3、Electrify the speed dome.

# **3 Basic operation**

Note: The button in gray display indicates nonsupport.

# 3.1 Turn on

Plug the power supply and turn on the power supply switch. Power supply indicator light shining indicates turning on the video recorder. After the startup you will hear a beep. The default setting of video output is multiple-window output mode. If the startup time is within the video setting time, the timing video recording function will start up automatically. Then the video indicator light of corresponding channel is shining and the DVR is working normally.

Note: 1. Make sure that the input voltage corresponds with the switch of the DVR power supply.

2. Power supply demands: 220V±10% /50Hz.

Suggest using the UPS to protect the power supply under allowable conditions.

# 3.2 Turn off

There are two methods to turn off the DVR. Entering [main menu] and choosing [turn off] in the [turn off the system] option is called soft switch. Pressing the power supply switch is called hard switch. Illumination:

1、Auto resume after power failure

If the DVR is shut down abnormally, it can automatically backup video and resume previous working status after power failure.

2、Replace the hard disk

Before replacing the hard disk, the power supply switch in the real panel must be turned off.

3、Replace the battery

Before replacing the battery, the setting information must be saved and the power supply switch in the real panel must be turned off. The DVR uses button battery. The system time must be checked regularly. If the time is not correct you must replace the battery, we recommend replacing the battery every year and using the same battery type.

#### Note: The setting information must be saved before replacing the battery otherwise information

will lose.

# 3.3 System Login

When the DVR boots up, the user must login and the system provides the corresponding functions with the user purview. There are three user settings. The names are **admin**, **guest** and **default** and these names have no password. **Admin** is the super user purview; guest and **default**'s permissions are preview and video playback. User **admin** and **guest**'s password can be revised, while their permissions can't be revised; user **default** is the default login user whose permission can be revised but not its password.

SYSTEM LOGIN	×
User Name admin  Password	
Please Login	
OK Cancel	

Picture 3.1 System Login

Password protection: If the password is continuous wrong three times, the alarm will start. If the password is continuous wrong five times, the account will be locked. (Through reboot or after half an hour, the account will be unlocked automatically).

For your system security, please modify your password after first login.

# 3.4 Preview

You can right click mouse to choose the switch between the windows.

The system date, time and channel name are shown in each viewing window. The surveillance video and the alarm status are shown in each window.

1	00	Recording status	3	?	Video loss
2	<mark>.V</mark> "	Motion detect	4	₽	Camera lock

Table 3.1 Preview icon

# 3.5 Desktop shortcut menu

In preview mode you can right click mouse to get a desktop shortcut menu. The menu includes: main menu,record mode,playback,PTZ control,High Speed PTZ,Alarm Output,color Setting,Output adjust,Logout,view1/4/8/9/16 screens.

Picture 3.2 Shortcut Menu

# 3.5.1 Main menu

When you login, the system main menu is shown as below.

Picture3.3 Main Menu

# 3.5.2 Playback

There are two methods for you to play the video files in the hard disk.

- 1. In the desktop shortcut menu.
- 2、Main menu>Record->Playback

Note: The hard disk that saves the video files must be set as read-write or read-only state.(4.5.1)

Picture 3.4 video playback

- 1. listed files 2. file information 3. file searching
- 4. file backup 5. Operation hint 6. Playback control

[Listed files] Look up the listed files that accord with the searching criteria.

[File information] Look up the found file information.

[File backup] Backup the chosen file. Click the button and operate as followed.

Note: The storage must be installed before the file backup. If the backup is terminated, the already backup can playback individually.

Picture 3.5 detect the storage

**Detect:** Detect the storage connected with the DVR such as hard disk or universal disk.

Erasure: Choose the file to delete and click erasure to delete the file.

Stop: Stop the backup.

**Backup:** Click backup button and the dialog box is popped up. You can choose the backup file according to the type, channel and time.

Main Menu->Record->Backup->Backup							
Type All Channel 1	<b>-</b>						
Start Time 🗾	2010 - 08 - 11 0	00 : 00 : 00	Remove				
End Time 🗾	2010 - 08 - 11 10	6 : 09 : 05	Add				
0 Channel	File Name		Length				
Required/Remaining:0.00 KB/1.00 GB							
		Start	Cancel				

Picture 3.6 recording backup

**Remove:** Clear the file information.

Add: Show the file information satisfying the set file attributes.

Start/Pause: Click the play button to start the backup and click the pause button to stop the

backup.

Cancel: During backup you can exit the page layout to carry out other functions.

[File searching] Search the file according to the searching parameter.

Search	Condition
File Type	All  Read/Write
Channel	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16
Start Time	2010 - 08 - 01 00 : 00 : 00
End Time	2032 - 01 - 01 00 : 00 : 00
	Play Search Cancel

Picture 3.7 file searching

File type: Set the searching file type.

Channel: Set the searching channel.

**Start Time:** Set the searching time scan.

[Playback control] Refer to the following sheet for more information.

Button	Function	Button	Function
	Play/pause		Backward
	Stop		Slow play
	Fast play		Previous frame
	Next frame	M	Previous file
	Next file	S	Circulation
ð	Full screen		

Note: Frame by frame playback is only performed in the pause playback state.

[Operation hint] Display the function of the cursor place.

# Special functions:

Accurate playback: Input time (h/m/s) in the time column and then click play button. The system can operate accurate playback according to the searching time.

Local zoom: When the system is in single-window full-screen playback mode, you can drag your mouse in the screen to select a section and then left click mouse to realize local zoom. You can right click mouse to exit.

# 3.5.3 Record Mode

Please check current channel status: "o" means it is not in recording status, "•" means it is in recording status.

You can use desktop shortcut menu or click [main menu]> [recording function]> [recording set] to enter the recording control interface.

[Schedule] Record according to the configuration.

[Manual] Click the all button and the according channel is recording no matter the channel in any state.

[Stop] Click the stop button and the according channel stops recording no matter the channel in any state.

# 3.5.4 PTZ control

Operation interface is as followed. The functions include: PTZ direction control, step, zoom, focus, iris, setup operation, patrol between spots, trail patrol, boundary scan, assistant switch, light switch,

level rotation and so on.

Note1. Decoder A(B)line connects with DVR A(B)line. The connection is right.

- 2. Click [main menu] >[system configuration] >[PTZ setup] to set the PTZ parameters.
- 3. The PTZ functions are decided by the PTZ protocols.

Picture 3.10 PTZ setup

[Speed] Set the PTZ rotation range. Default range: 1 ~ 8.

[Zoom] Click / 🛨 button to adjust the zoom multiple of the camera.

[Focus] Click / E button to adjust the focus of the camera.

[Iris] Click / 🗄 button to adjust the iris of the camera.

[Direction control] Control the PTZ rotation. 8 directions control is supportive.(4 directions in Front panel is supportive)

【High speed PTZ】Full-screen show channel image. Left press mouse and control PTZ to rotate

orientation. Left press mouse and then rotate the mouse to adjust the zoom multiple of the camera.

[Set] Enter the function operation menu.

[Page switch] Switch between different pages.

# Special functions:

# 1、Preset

Set a location for the preset, calls the preset points, PTZ automatically turns to the setting position

1) Preset option

Set a location for the preset, procedure is as follows:

Step1: in Picture 3.10, click the Direction button will turn into preset position, click the Settings button to enter Picture 3.11.

Step 2: click the Preset button, then write the preset points in the input blank,

Step 3: click Settings button, return the Picture 3.10 Complete setup, that is the preset points and

preset position corresponds.

# 2、Cruise between Points

Multiple preset points connected cruise lines, call cruise between points, the PTZ run around on

#### the line

1) Cruise Between Points Settings

Cruise lines is connected by multiple preset points, setting procedure is as follows:

Step1: In Picture 3.10, the Direction key will turn PTZ to designated location , click Settings

button to enter Picture 3.13,

Step 2: click Cruise buttons, the write proper value into the Cruise Line and Preset Points blank, then click Add Preset Points button, complete setting (also can add and delete cruise line which has

been set up)

Step 3: repeat step1 and step2 , until set out all the preset designated cruise lines  $_{\circ}$ 

**Remove Preset**: Please input preset value in the blank, click Remove Preset button, then remove the preset points.

**Remove Cruise Line:** Input the number of cruise line, click Remove Cruise Lines button, then remove the cruise lines set.

# 2) The Calls of Cruise between Points

In Picture 3.10, click Page Shift button, enter PTZ control menu as shown in Picture 3.12. Please input the number of cruise in the value blank, then click Cruise between Points button, PTZ begins to work on the cruise line. Click Stop button to stop cruise.

# 3、Scan

PTZ also can work on the preset scan line repeatedly.

# 1) Scan setup

Step1: In Picture 3.10, click Setup button , enter Picture 3.14;

Step2: Click Scan button, the input proper value in the scan value blank;

Step3: Click Start button, enter Picture3.10, here you can set the following items: Zoom

Focus, Aperture, Direction and so on. Click Setup button to go back Picture 3.14;

Step4: Click End button to complete setup. Click the right button of the mouse to exit.

	PTZ Con	ıfig		×.

In Picture 3.10, click Page Shift button, then enter PTZ control menu as shown in Picture 3.12. Please input the number of scan in the value blank, then click Scan button, PTZ begins to work on the scan line. Click Stop button to stop.

# 4、Boundary Scan

# 1) Boundary Scan setup

Step1: In Picture 3.10, click Direction button to turn the PTZ to preset direction, then click Setup

button enter Picture 3.15, select the left boundary, return to Picture 3.10;

Step2: Please click direction arrows to adjust PTZ direction, click Setup button enter Picture3.15,

then select the right boundary ,return to Picture 3.10;

Line scan button border Function Preset Tour Pattern Border Right

Step3: Complete setup, that is the position of left and right boundary

# 2) Boundary Scan Calls

In Picture 3.10, click Page Shift button, then enter PTZ control menu as shown in Picture 3.12. Please input the number of scan in the value blank, then click Scan button, PTZ begins to work on the scan line. Click Stop button to stop.

# 5、Horizontal Rotating

Click Horizontally Rotating button, PTZ begins to rotate horizontally (relative to the original position of the camera). Click the Stop button to stop.

# 6、Rotate

Click on horizontal Rotating button, PTZ turn around.

# 7、Reset

PTZ restart, all the data clears to 0...

# 8、Page Shift

In Picture 3.12, click Page Shift button into Picture3.16, setting auxiliary function. Auxiliary

number corresponding to auxiliary switch on the decoder.

Picture 4.1 Record Config

[Channel] Choose the corresponding channel number to set the channel. Choose the all option to set the entire channels.

[Redundancy]Choose the redundancy function option to implement the file double backup function. Double backup is writing the video files in two hard disks. When you do the double backup, make sure that there are two hard disks installed. One is read-write disk and the other is redundant disk. (refer to 4.5.1)

[Length] Set the time length of each video file. 60minutes is default value.

[PreRecord] Record 1-30 seconds before the action. (time length is decided by the code stream) [Record mode] Set video state: schedule, manual or stop.

**Schedule:**Record according to the set video type (common, detection and alarm)and time section.

Manual: Click the button and the according channel is recording no matter the channel in any state.

**Stop:**Click the stop button and the according channel stops recording no matter the channel in any state.

[Period] Set the time section of common recording, The recording will start only in the set range.

[Record type] Set recording type: regular, detection or alarm.

Regular: Perform the regular recording in the set time section. The video file type is "R".

**Detect:** Trigger the "motion detect", "camera mask" or "video loss" signal. When above alarm is set as opening recording, the "detection recording" state is on. The video

file type is "M".

Alarm: Trigger the external alarm signal in the set time section. When above alarm is set as opening recording, the "detection recording" state is on. The video file type is "A".

Note: Refer to chapter 4.3 to set corresponding alarm function.

# 4.2.2 Playback

Refer to chapter 3.5.2.

#### 4.2.3 Backup

You can backup the video files to external storage through setup.

# Note: The storage must be installed before the file backup. If the backup is terminated, the already backup can playback individually.

[Detect] Detect the storage connected with the DVR such as hard disk or universal disk.

[Erase] Choose the file to delete and click erasure to delete the file.

[Stop] Stop the backup.

[Backup] Click backup button and the dialog box is popped up. You can choose the backup file

according to the type, channel and time.

Main M	Aenu->Record->Backup->Backup	$\mathbf{X}$
Type Channel		
Start Time	2010 - 08 - 11 00 : 00 : 00	Remove
End Time		Add
0 Chan	nel File Name	Length
Required/R	emaining:0.00 KB/1.00 GB	
	Start	Cancel

Picture 4.4 File Backup

**Remove:** Clear the file information.

Add: Show the file information satisfying the set file attributes.

Start/pause: Click the play button to start the backup and click the pause button to stop the

backup.

Cancel: During backup you can exit the page layout to carry out other functions.

# 4.3 Alarm Function

Alarm functions include: motion detect, video blind, video loss, alarm input and alarm output.

# 4.3.1 Motion Detect

When system detects the motion signal that reaches the set sensitivity, the motion detect alarm is on and the linkage function is turned on.

💏 Main Menu-	->Alarm->Motic	n Detect	<b>X</b>
Channel Sensitivity	1 Middle	Enable Region	Set
Period	Set	Interval	1 Sec.
Alarm Output	12	Delay	10 Sec.
Record Channel	12345	6789	10111213141516
Tour	12345	6789	10111213141516
Snapshot	12345	)6789	10111213141516
PTZ Activation	Set	Delay	10 Sec.
Show Message	Ο	Send Email	0
Buzzer	0	FTP upload	0
	Adv	vanced	OK Cancel

Picture 4.4 Motion Detect

[Channel] Choose the set motion detect channel.

[Enable] means that the motion detect function is on.

[Sensitivity] Choose in the six options according to the sensitivity.

[Region] Click setup and enter the set area. The area is divided into PAL 8x8. Green block means the current cursor area. Yellow block means the dynamic detect defensive area. Black block means the unfenced area. You can set the area as followed, Drag the mouse and draw the area.

【Period】 Trigger the motion detect signal in the set time section. You can set according to week or set uniformly. Each day is divided into four time sections.■ means the set valid.

Thursda			->₩0		Detect->	361				2
✓ 00 ÷ 00		24 : 00	)			00 : 00		24 : 00	)	
00 : 00	-	24:00	)			00 : 0	-	24:00	)

Wed										
Thu										
Fri										
Sat										
							OK		Cancel	

Picture 4.6 set the time section

[Interval] Only one alarm signal is turned on even there are several motion detect signals in the set interval.

[Alarm output] Start the external equipment of corresponding linkage alarm when the motion detect alarm is turned on.

[Delay] Delay a few moments and stop when the alarm state is turned off. The range is 10~300 seconds.

[Record channel] Choose the recording channel (multiple option supportive). Trigger the video signal when the alarm is turned on.

**Note:** Set in the [recording setup] and perform the linkage recording. Start detecting video files in the corresponding time section.

[Tour] means that the selective channel is single window alternate patrol preview. The interval is

set in the [MainMenu]>[System] > [Tour].

[Snapshot] Choose record channels, when alarm happens, system triggers related channels for snapshot signal.

**Note**:For Snapshot activation,pls go to set period,detect and alarm enable at MainMenu->Record->Record config,

[PTZ Activation] Set the PTZ activation when the alarm is turned on.

**Note:** PTZ activation is set in the [shortcut menu] >[ PTZ control]. Set the patrol between spots, trail patrol and so on.

Mai	n Menu->Alarm-	>Motio	on Detect-	>PTZ Activation

# Picture 4.12 Abnormal

【Event Type】	selecting abnormity you want to inspect
[Enable]	Select it to make sure abnormal function workable
【Show message】	Automatically alarm cue dialog box come out of the main screen
[Buzzer]	Device will have two long nosie "di di" while alarm is happening

#### 4.4 System setup

Set the system parameters such as General,Encode,NetWork,NetService,GUI display,PTZ config, RS232 and Tour setup.

## 4.4.1 General

X Main Menu-	->System->Gene	ral			
System Time	2010 - 08 - 12		12 : 28 : 46		
Date Format	YYYY MM DD	-	DST		
Date Separator	-	-			
Time Format	24-HOUR	-			
Language	ENGLISH	-	)		
HDD Full	Overwrite	-			
DVR No.	0		)		
Video Standard	PAL	-			
Auto Logout	0		) min		
			ОК	Canc	el

Picture 4.13 General setup

[System time] Set the system data and time.

[Date format] Choose the data format: YMD, MDY, DMY.

[Date Separator] Choose list separator of the data format.

[Time Format] Choose time format: 24-hour or 12-hour.

### [Language]

Arabic, Czech, English, Finnish, Greek, Indonesian, Italian, Japanese, Portuguese, Russian, Thai, T-Chinese, S-Chinese, Turkish, Brazilian, Bulgarian, Farsi, French, German, Hebrew, Hungarian, Polish, Romanian, Spanish, Swedish, Vietname se

[HDD full] Choose stop record: Stop recording when the hard disk is full.

Choose overwrite: Cover the earliest recording files and continue recording when the hard disk is full.

[DVR No.] Only when the address button in the remote controller and the corresponding DVR number is matched, the remote operation is valid.

[Video Standard] PAL or NTSC.

[Auto Logout] Set the latency time in 0-60. 0 means no latency time.

**[DST]** Choose the summer time option and pop the dialog box as followed.

Main Menu->System->General->DST	
Enable Day of Week O Date Start: Jan V Ist V Mon V End: Jan V Ist V Mon V	01 : 01 01 : 01 OK Cancel

Picture 4.14 DST (week)

	able y of Week 🌻 Date		
Start:	2010 - 01 - 01 01 : 01		
End:	2010 - 01 - 01 01 : 01		
		OK Cancel	

Picture 4.15 DST (date)

#### 4.4.2 Encode setup

Set the video/audio code parameter: video file, remote monitoring and so on. Set every independent channel's coding parameter in the left part, and set the combine encode parameter in the right part.

Note: Combine encode introduces video compression technique which combines and compresses multi-channel's video to a special channel.Applying for multi-channel playback simultaneously, Dial-up multi-channel real-time monitor, mobile monitor and so on.

🔤 Main Menu->	-System->Enco	de		
Channel	1			
Compression	H.264		Extra Streaml	$\mathbf{F}$
Resolution	CIF(352x288)		QCIF(176x144)	
Frame Rate(FPS)	25		25	
Bit Rate Type	VBR		VBR	
Quality	Good		General	
Bit Rate(Kb/S)	512		192	
I Frame Interval	2		2	
Video/Audio				
Advanced OK Cancel				

Picture 4.16 Encode setup

[Channel] Choose the channel number.

[Compression] Standard H.264 main profile.

[Resolution] Resolution type:D1/HD1/CIF / QCIF.

[Frame Rate] P:1 frame/s~25 frame/s; N: 1 frame/s~30 frame/s

[Bit Rate Type] You can choose limited code stream or variable code stream. When you choose

the variable code stream there are six image quality options.

[Bit Rate] Set the code stream value to modify the image quality. The larger code stream value the better image quality.

D1 (1000~1500kbps) ,CIF (384~1500kbps) , QCIF(64~512kbps)

[Video/Audio] When the icons are all in reverse displayed, the video file is video and audio multiplex stream.

#### Combine Enable

【Combine Enable】 When the icons are all in reverse displayed, opening combination coding functions.

[Mode] multi-channel playback is used in all channels playback simultaneously, and the narrowband transmission is used in multi-channel real-time remote monitoring simultaneously at narrowband state, especially used in mobile monitor.

#### 4.4.3 Network setup

🖙 Main Menu	->Sysi	tem->N	etWork				×
Net Card	Wire	e Netca	rd 🔽	DHCP	Enable		
IP Address	192	· 168	+ 1	10			
Subnet Mask	255	· 255	· 255	0			
Gateway	192	· 168	+ 1	1			
Primary DNS	0	• 0	. 0	0			
Secondary DNS	0	· 0	. 0	0			
TCP Port	3456	7					
HTTP Port	80						
HS Download							
Transfer Policy	Qua	ality Pro	efer 🔻				
					OK	Ca	ncel

Picture4.17 Network

[Net Card] You can choose cable network card or wireless network card.

[DHCP Enable] Obtain IP address automatically(not suggested)

**Note:** DHCP server is preinstalled.

[IP address] Set the IP address. Default: 192.168.1.10.

[Subnet mask] Set the subnet mask code. Default: 255.255.255.0.

[Gateway] Set the default gateway. Default: 192.168.1.1.

[DNS setup] Domain Name Server. It translates the domain name into IP address. The IP address is offered by network provider. The address must be set and reboot then it works.

【TCP port】 Default: 34567.

[HTTP port] Default: 80.

【HS Download】

[Transfer Policy] There are three strategies: self-adaption, image quality precedence and fluency precedence. The code stream will adjust according to the setup. Self-adaption is the tradeoff between the image quality precedence and fluency precedence. Fluency precedence and self-adaption are valid only when the assistant code stream is turned on. Otherwise image quality precedence is valid.

#### 4.4.4 NetService

Choose the network service option and click the set button to configure the advanced network

Main Menu->S	ystem->NetService
Net Server PPPoE NTP EMAIL IP FILTER DDNS FTP ARSP AlarmServer Mobile Monitor UPNP	Net Server Info           0:           0: NTP:10           0: Your SMTP Server:25           0: :0 :0           DDNS Set Invalid           0: FTP           1: xmsecu.com:15000           0:           1: 34599           0
	Set OK Cancel

functions or double click the service button to configure the parameters.

Picture 4.18 NetService

Enable User Name Password								
IP Address	0-	2	0	<u>.</u>	0	Ö		

[PPPoE setup]

Picture4.19 PPPOE

Input the user name and password that ISP (Internet service provider) provides. After saving it reboot up your system. Then the DVR will build a network connection based on PPPoE. The IP address will change into dynamic IP address after above operation is well done.

Operation: After PPPoE dialing successfully look up the IP address in the [IP address] and obtain the current IP address. Then use this IP address to visit the DVR through user port.

#### 【NTP setup】

Enable		
Server IP	NTP	
Port	123	
Time Zone	GMT+08:00	
Update Period	10	min

Picture 4.20 NTP

The NTP server must be installed in the PC.

Host computer IP: Input the IP address installed NTP server.

Port: Default: 123. You can set the port according to NTP server.

**Time zone**:London GMT+0 Berlin GMT +1 Cairo GMT +2 Moscow GMT +3 New Delhi GMT +5 Bangkok GMT +7 Hongkong Beijing GMT +8 Tokyo GMT +9 Sydney GMT +10 Hawaii GMT-10 Alaska GMT-9 Pacific time GMT-8 American mountain time GMT-7 American mid time GMT-6 American eastern time GMT-5 Atlantic time GMT-4 Brazil GMT-3 Atlantic mid time GMT-2.

Update Period: The same with the NTP server check interval. Default: 10minutes.

#### [EMAIL setup]

If the alarm is turned on or the alarm linkage photos are taken, send an email about the alarm information and the photos to appointed address.

Main Me	nu->System->NetService->EMAIL
Enable	<b>V</b>
SMTP Server	Your SMTP Server
Port	25
Need SSL	
User Name	
Password	
Sender	
Receiver	
Title	Alarm Message
	OK Cancel

#### Picture 4.21 EMAIL

**SMTP server:**Email server address. It could be an IP address or domain name. Domain name can be translated only it is the correct DNS configuration.

Port: Email server port number.

**SSL:**Decide whether using Secure Socket Layer protocol to login.

User Name: Apply the email server user name.

**Password:** Input the password corresponding to the user.

Sender: Set the email sender address.

**Receiver:** Send the email to appointed receivers when the alarm is turned on. You can set three receivers at most.

Title: You can set as you wish.

【 IP Filter setup】

When choosing the white list, only the listed IP address can connect the DVR. The 64 IP addressed are supportive in the list.

When choosing the black list, the listed IP address can not connect the DVR. The 64 IP addressed are supportive in the list.

You can delete the set IP address by  $\sqrt{}$  in the options.

**Note:** When the same IP address is in the white and black list at the same time, the black list precedence is higher.

Main Menu->System->NetService->IP FIL TER					
Enable					
Restricted Type Blacklist					
0 Banned IP					
Delete OK Cancel					

#### Picture 4.22 IP IP FILTER

#### [DDNS]

It is the abbreviation of dynamic domain name server.

Local domain name: Provide the domain name registered by DDNS.

**User name:** Provide the account registered by DDNS.

**Password:** Provide the password registered by DDNS.

When the DDNS is successfully configured and start, you can connect the domain name in the IE address column to visit.

Note: The DNS setup must be configured correctly in the network setup.

DDNS Type	CN99
Enable	
Domain Name	your.3322.org
User Name	(F
Password	
	OK Cancel

Picture 4.23 DDNS setup

[FTP setup] FTP is available only when alarm happens, or alarm activates record and snapshot, it will

upload related record and snapshot pictures to FTP server.

Main Menu	->System->Net	tService->FT	P
Enable			
Server IP FT			
Port 21			
User Name			
Password		🔲 🔲 Anonyi	nous
Max File Lengt	128	M	
DirName

#### 4.7 Shut down system

Refer to chapter 3.5.8.

### **5 FAQ and maintenance**

#### 5.1 FAQ

If the problems are not listed, please contact the local service or call the HQ service. We are willing to offer the service.

#### 1. The DVR can not boot up normally.

Possible reasons are as followed:

- 1 The power supply is not correct.
- 2 Switch power supply line is not in good connection.
- 3 Switch power supply is damaged.
- 4 The program updating is wrong.
- 5 The hard disk is damaged or the hard disk lines are broken.
- 6 The front panel is damaged.
- 7 The main board of the DVR is damaged.

#### 2. The DVR reboots automatically or stops working after boot up a few minutes.

Possible reasons are as followed:

- 1 The input voltage is not stable or too low.
- 2 The hard disk is damaged or the hard disk lines are broken.
- 3 The power of the switch power supply is low.
- 4 Frontal video signal is not stable.
- 5 Bad heat radiator or too much dust or bad running circumstance for the DVR.
- 6 The hardware of the DVR is damaged.

#### 3. System can not detect hard disk.

Possible reasons are as followed:

- 1 The hard disk power supply line is not connected.
- 2 The cables of the hard disk are damaged.
- 3 The hard disk is damaged.
- 4 The SATA port of main board is damaged.
- 4. There are no video outputs in single channel, multiple channels and all channels.

Possible reasons are as followed:

- 1 The program is not matched. Please update the program.
- 2 The image brightness is all 0. Please restore the default setup.
- 3 There is no video input signal or the signal is too weak.
- 4 The channel protection or the screen protection is set.
- 5 The hardware of the DVR is damaged.

#### 5. Real-time image problems such as the image color or the brightness distortion.

Possible reasons are as followed:

- 1 When using the BNC output, the option between the N mode or PAL mode is wrong and the image becomes black and white.
- 2 The DVR is not matched the monitor impedance.
- 3 The video transmission distance is too far or the loss of the video transmission line is too large.
- 4 The color and brightness setting of the DVR is wrong.

#### 6. I can not find the video files in local playback mode.

Possible reasons are as followed:

- 1 The data line of the hard disk is damaged.
- 2 The hard disk is damaged.
- 3 Update the different program with the origin program files.
- 4 The video files to look up are covered.
- 5 The recording is not on.

#### 7. The local video is not clear.

Possible reasons are as followed:

- 1 The image quality is too bad.
- 2 The reading program is wrong. Reboot up the DVR.
- 3 The data line of the hard disk is damaged.
- 4 The hard disk is damaged.
- 5 The hardware of the DVR is damaged.

#### 8. There is no audio signal in the surveillance window.

Possible reasons are as followed:

- 1 It is not an active tone arm.
- 2 It is not an active sound box.
- 3 The audio lines are damaged.
- 4 The hardware of the DVR is damaged.

#### 9. There is audio signal in the surveillance window but mo audio signal in the playback

#### state.

Possible reasons are as followed:

- 1 Setting issues: the audio option is not chosen.
- 2 The according channel is not connected with the video.

#### 10. The time is wrong.

Possible reasons are as followed:

- 1 Setting is wrong..
- 2 The battery is in bad connection or the voltage is too low.
- 3 The oscillation is damaged.

#### 11. The DVR can not control the PTZ.

Possible reasons are as followed:

- 1 There is something wrong with the frontal PTZ.
- 2 The setting, connection or the installation of the PTZ decoder is not correct.
- 3 The connections are not correct.
- 4 The PTZ setting of the DVR is not correct.
- 5 The protocols of the PTZ decoder and the DVR are not matched.
- 6 The address of the PTZ decoder and the DVR are not matched.
- 7 When multiple decoders are connected, the far port of the PTZ decoder line A(B) must connect a  $120 \Omega$  resistance to reduce the reflection otherwise the PTZ control is not stable.
- 8 The distance is too far.

#### 12. The motion detect is not working,

Possible reasons are as followed:

- 1 The time range set is not correct.
- 2 The motion detect area set is not correct.

- 3 The sensitivity is too low.
- 4 Limited by some hardware edition.

#### 13. I can not login via web or CMS.

Possible reasons are as followed:

- 1 The system is windows 98 or win me. We recommend updating to windows 2000sp4 or higher Version or installing the software for low edition.
- 2 ActiveX is hold back.
- 3 The version is not exceeded dx8.1. Update the display card driver.
- 4 Network connection failure.
- 5 Network setting issues.
- 6 Invalid password or user name.
- 7 The CMS is not matched the DVR program version.

# 14. The image is not clear or there is no image in network preview state or video file playback state.

Possible reasons are as followed:

- 1 Network is not stable.
- 2 The user machine is resource limited.
- 3 Choose the play-in-team mode in the network setup of DVR.
- 4 The region shelter or channel protection is set.
- 5 The user has no surveillance purview.
- 6 The real-time image of the hard disk recording machine itself is not clear.

#### 15. Network connection is not stable.

Possible reasons are as followed:

- 1 Network is not stable.
- 2 IP address is conflicted.
- 3 MAC address is conflicted.
- 4 The net card of the DVR is bad.

#### 16. There is something wrong with the USB backup or writing a CD.

Possible reasons are as followed:

1 The rewritable machine and the hard disk are shared the same data lines.

- 2 The data is too much. Please stop recording and backup.
- 3 The data exceeds the backup storage.
- 4 The backup equipment is not compatible.
- 5 The backup equipment is damaged.

#### 17. The keyboard can not control the DVR.

Possible reasons are as followed:

- 1 The serial port of the DVR is not set correctly.
- 2 The address is not correct.
- 3 When multiple transformers are connected, the power supply is not large enough. Please give each transformer individual power supply.
- 4 The distance is too far.

#### 18. Alarm can not be recessional.

Possible reasons are as followed:

- 1 The setting of the alarm is not correct.
- 2 The alarm output is turned on manually.
- 3 The input machine is damaged or the connections are not correct.
- 4 There are some problems for specific program edition, Please update the program.

#### 19. Alarm is not working.

Possible reasons are as followed:

- 1 The setting of the alarm is not correct.
- 2 The connection of the alarm is not correct.
- 3 The alarm input signal is not correct.
- 4 A alarm is connected with two loops synchronously.

#### 20. The remote controller is not working,

Possible reasons are as followed:

- 1 The remote control address is not correct.
- 2 The remote control distance is too far or the angle is too large.
- 3 The battery is used up.
- 4 The remote controller or the front panel of the recording machine is damaged.

#### 21. The storage time is not enough.

Possible reasons are as followed:

- 1 Front vidicon quality is bad. The lens is too dirty. The vidicon is in backlighting installation.
- 2 The hard disk capability is not enough.
- 3 The hard disk is damaged.

#### 22、 The downloading files can not play.

Possible reasons are as followed:

- 1 There is no media player.
- 2 There is no DX8.1 software or higher edition.
- 3 There is no DivX503Bundle.exe file to play AVI video files.
- 4 The DivX503Bundle.exe and ffdshow-2004 1012 .exe files must be installed in the windows xp system.

#### 23. I can not remember the advanced code or network code in the local menu operation.

Please contact the local service or call the HQ service. We will offer the service according the machine type and the program edition.

#### 5.2 Maintenance

- 1 Please brush printed circuit boards, connectors, fans, machine box and so on regularly.
- 2 Please keep the grounding well done to prevent the video or audio signal interfered and the DVR from static or inductive electricity.
- 3 Do not pull out the video signal line or RS-232 port or RS-485 port with the power on.
- 4 Do not use the TV in the local video output port(VOUT) of DVR. It will damage the video output circuit easily.
- 5 Do not turn off the switch directly. Please use the turn-off function in the menu or press the turn-off button in the panel (3 seconds or longer) to protect the hard disk.
- 6 Please keep the DVR away from heat resource.
- 7 Please keep the DVR ventilated for better heat radiator.

Please check the system and maintain regularly.

### Appendix 1.Remote controller operation

Serial	Name	Function	
number			
1	Multi-window	Same function as Multi-window button in the front	
	button	panel	
2	Numeric button	Code input/number input/channel switch	
3	【Esc】	Same function as [Esc] button in the front panel	
4	Direction button	Same function as direction button in the front panel	
5	Record control	Control the record	
6	Record mode	Same function as "Record mode"	
7	ADD	Input the number of DVR to control it	
8	FN	Assistant function	

### Appendix 2. Mouse operation

#### \*Take right hand as an example

The mouse in USB connection is supported.

Operation	Function		
	Double click one item in the file list to playback the		
	video		
Double left click	Double click the playback video to zoom in or out the		
	screen		
	Double click the channel to make it full screen display		
	double click again to resume the multi-window display		
Left click	Choose the according function in the menu		
Right click	Pop desktop shortcut menu in preview state		
	Current shortcut menu in the menu		
Press middle	Add or subtract number in the number setting		
button	Switch the items in the combo box		
	Page up or down in the list		
Move mouse	Choose the widget or move the item in the widget		
	Set the motion detect area		
Drag mouse	Set the cover area		

### Appendix 3.Hard disk capability calculation

Make sure the hard disk installed to the DVR for the first time. Pay attention to the IDE hard disk lines connection.

1. Hard disk capability

There is no limit for recording machine. We recommend 120G~250G size to keep better stability.

2. Overall capability option

The hard disk capability formula is:

Overall capability (M) =channel number\*time (hour) \*capability in an hour (M/hour)

The recording time formula is:

Recording time (hour) = \_\_\_\_\_\_ overall capability (M)

Capability in an hour (M/hour) \*channel number

The DVR introduces the H.264 compression technology. Its dynamic range is very large so the hard disk capability calculation is based on the estimation values of each channel creating files in an hour.

#### **Example:**

For one piece 500G HDD,real time CIF for recording, it will keep recording for about 25 days.HDD spaces per channel is 200M/H, if 4channels real time CIF at 24hours recording uninterrupted, it can last:500G/(200M/H\*24H\*4ch)=26 days

## Appendix 4. Technique parameters

	Туре	4ch	8ch	16ch
